

Hands-on Course in Ultrafast Sample Treatment for Proteomics

27th - 28th

September 2021

XVI edition

Module I - Theory

Fundamentals of High-Resolution Mass Spectrometry-based Proteomics

Sample preparation for Mass Spectrometry-based Proteomics

Ultrasonic-assisted digestions - Proteosonics

Protein identification by Mass Spectrometry

nanoESI-QTOF and Label Free Quantification

Module II - Hand-on

Sample preparation: high throughput in-solution digestion

Data acquisition and analysis: Protein identification and quantification

Data analysis: Perseus and Cytoscape

The course is 40% hands-on in the laboratory (live video streaming, participants work in their own laboratory) | 40% bioinformatic tools and 20% theory.

Participants need to have access to one laboratory. All samples and necessary reagents are delivered by us.

The course is based on the following recently published work:

Ultrasonic-Based Filter Aided Sample Preparation as the General Method to Sample Preparation in Proteomic.

Registration fees: 560€*

Special rates for groups.
